

Auction

- Choose
 - Unissued share you control
 - Share in the bank pool
- Minimum bid = total company network value
- In clockwise order, raise or pass (no re-entry)
- Winner receives issued share

Winning Bid

- Unissued share → Winning bid to company treasury
- Bank share → Winning bid to bank
- No bids → Share to bank pool; company treasury receives share value from bank

Act for Company

- Must control share (issued or unissued)
- All costs from company treasury

Expand Network

- Build on accessible, uncontrolled hex
 - Can only build on one type of hex on a turn
 - Total value built this turn $\leq$ number of issued shares
- Cost: \$5 x chosen hex value
- Place number of chips equal to hex value and company cube on top
- If expanding to city, payout per share = hex value

Lease Network

- Must use shortest route
- Cost = total value of hexes used
- Payout per share of leased companies = leased hex(es) value

Upkeep

- Pay \$1 per unissued or leveraged share from personal cash to company
 - If unable, move one unissued share to bank pool and place share value from bank in company treasury

Leverage Share

- Rotate issued share 90° to indicate it's been leveraged and receive from the bank cash = share value
- Leveraged share require upkeep cost and are worth nothing at end-game

Pass

- Do nothing

Game End

- If all players consecutively pass, game ends immediately
- If last share of any company is issued, play two more rounds, ending before player who issued final share
- Final Score is sum of
 - Cash
 - Value of issued, non-leveraged shares
